

The KNX Connection Module CM.1.1.1 allows a fast access to the twisted-pair (TP) KNX wires. The Connection Module is for DIN rail mounting, 2 modules wide and is connected within the distribution box with a standard KNX connection terminal to the KNX line. On a special KNX socket the KNX line is available at all times from outside the distribution box. The new module is a cost-efficient alternative to the fixed installation of a USB or IP Interface. For programming or changing parameters of KNX components its no more necessary to open the cover of the distribution box or disassembling of a push button sensor.

An additional available KNX Configuration Tool for commissioning of KNX components with accordingly connector can be connected very easy to the KNX line without any installation work.

Technical Data

Connection terminals	KNX Connection Terminal black/red
	KNX Connector female
Ambient temperature	-5°C to +50°C
Protection class	IP20
Assembly	DIN rail
Dimensions	2 modules 35 x 91 x 62 mm (WxHxD)

Accessories

CM.9.1.1

KNX Connector male

CM.9.1.2

KNX Connector female
